

Challenges & Perspectives in Peri-implant Soft Tissue Reconstruction

07. – 08. November, 2024 **Munich**

Dr. **O. Zuhr**

Dr. Otto Zuhr enjoys a highly-regarded international reputation for his achievements in the fields of perio-dontics, peri-implantary diseases, as well as esthetic gingiva corrections. Dr. Zuhr studied dentistry at the University of Aachen, Germany, and the USA. He is a specialist in periodontology and has been a board member of the German Association for Periodontics since 2007. In 2011, together with Prof. Hürzeler, he published a reference book called «Plastic-Esthetic Periodontal and Implant Surgery», which his colleagues have named «without doubt one of the most important oral surgery publications of the last years, and a must for each periodontists and implantologists.»

What to expect?

Challenges and Perspectives in Peri-implant Soft Tissue Reconstruction – Paving the way to biological and esthetic long-term success

The structural composition and esthetic appearance of the peri-implant mucosa emerges continuously as one of the key points in modern implant dentistry. While in the posterior area biological aspects with a keratinized, thick and attached peri-implant mucosa are clearly in the center of interest, it is in the esthetic zone its harmonic and natural look.

Precise planning of the initial incisions, the surgical flap preparation, the flap mobilization and the final suturing technique for flap stabilization becomes essential to consider these aforementioned factors, presently acknowledged as significant and indisputable parameters of success. Furthermore, understanding the histologic composition of

the palatal mucosa as the predestinated donor site for soft tissue autograft harvesting as well as understanding their biological interactions around teeth and implants in the course of early wound healing becomes fundamental for up to date soft tissue management and for addressing higher patients' expectations.

This 2-day practical workshop goes deep into the details of contemporary clinical concepts with regard to the handling and reconstruction of the soft tissues surrounding implants. Alongside the theoretical and practical fundaments, the most innovative clinical strategies will be covered and debated extensively. To this end, participants will carry out a series of practical exercises with the aid of magnifying lenses and under the careful supervision of Dr. Otto Zuhr.

Thursday, 07 November, 2024

| | |
|--------------------|---|
| 9.00–10.00 | Lecture Microsurgical principles in plastic periodontal and implant surgery – scientific datas and their clinical relevance. |
| 10.00–11.30 | Lecture Exploring the human palate – soft tissue autografts and their substitutes. |
| 11.30–12.00 | Coffee break |
| 12.00–13.00 | Hands-on & video session Pig-jaws: soft tissue auto-graft harvesting/SCTG – single incision technique. |
| 13.00–14.00 | Lunch |
| 14.00–15.30 | Lecture The composition of the peri-implant mucosa and its impact on peri-implant disease prevention. |
| 15.30–17.00 | Hands-on & video session Pig-jaws: implant uncov- erage in non-esthetic sites – FGG. |

Friday, 08 November, 2024

| | |
|--------------------|---|
| 9.00–10.30 | Lecture Anterior implants – immediate or delayed? |
| 10.30–11.30 | Lecture Gingival recession therapy – from what we learned in plastic periodontal surgery. |
| 11.30–12.00 | Coffee break |
| 12.00–13.00 | Hands-on & video session Pig-jaws: multiple gingival recession therapy: the modified tunneling technique/SCTG – deepithelialized FGG. |
| 13.00–14.00 | Lunch |
| 14.00–15.00 | Lecture Further indications... |
| 15.00–17.00 | Hands-on & video session Pig-jaws: implant uncov- erage in esthetics sites – modified pouch technique and palatal island FLAP/SCTG – distal wedge technique in the tuberosity area. |

Registration

Firm reservation for the course 07 – 08 November 2024, The fee for both course days is **1200 €** (incl. VAT).
