9.2 Sterility assurance and resterilization

The sterility of implants whose packaging has been damaged, or where the packaging was opened but the implant was not used immediately, cannot be guaranteed and the implants must not be used. Implants that have passed the date of expiration must not be used or resterilized. The manufacturer does not accept any liability for resterilized implants.

10. Storage

Implants must be stored in their original protective pack under room temperature, and protected from direct sunlight.

11. Documentation and traceability

The manufacturer recommends comprehensive clinical, radiographic, photographic and statistical documentation. Implant traceability must be ensured.

Note: Use adhesive labels enclosed in protective pack for documentation on patient's records (art./lot./sn.).

12. Product documentation

Detailed information on the handling of implants of Thommen Medical may be found in our instructions for use. Ask our national representatives for our product brochures and instructions for use.

For further information regarding surgical procedure, please refer to www.ifu-tm.com/THMEN141.html.
