

PRESS RELEASE

Grenchen, 29th January 2018

New from Thommen! The 3.0 Implant System for narrow spaces

The ELEMENT PF 3.0 implant is now available from Thommen Medical. The implant was specifically developed for replacement of the lateral incisors of the maxilla and the central and lateral incisors of the mandible.

Dr. Daniel Snétivy, CTO of Thommen Medical, proudly presents the **Thommen 3.0 Implant System** and adds, "We retained the tried, tested and extremely successful characteristics of the Thommen Implant System during development. An important factor for us in the design of this product was maintaining our "fail-safe engineering". We always develop products that will minimize any possible damage to the patient, even in exceptional circumstances such as excessive mechanical force in an accident (e.g. fracture of the abutment screw for the sake of the protection of the implant)."

The Thommen 3.0 also succeeds in combining important new and existing product characteristics: designed for simplicity, uses the smallest abutment screw, manufactured of proven, cold-formed pure titanium grade 4, and features the unique superhydrophilic INICELL® implant surface.

Dr. Konrad Meyenberg from Zurich is impressed, "The 3.0 is an excellent advancement of the application spectrum of the Thommen Medical implant line. The unique selling point of the small diameter of the abutment screw allows for a minimally invasive procedure without compromise, due to the highly precise and elegant screw connection and choice of material."

Like all products from Thommen, the Thommen 3.0 Implant System is remarkably straightforward and easy to use. The new line of products includes the reduced diameter implant 3.0, the VARIOunite abutment, and a range of associated instruments.
