Thommen Medical Sets a New Milestone: Sterile VARIOMulti Abutments for Safe and Efficient Patient Care

With the market launch of sterile VARIOMulti abutments and new angled variants in the EU, Thommen Medical expands its portfolio with innovative components for modern, comprehensive implantology solutions, underlining its commitment to holistic, clinically proven treatment concepts – from surgery to prosthetics.

The continuous development of the VARIOMulti system reinforces this focus. Building on the digital product expansion in 2021 and the introduction of additional prosthetic components the following year, Thommen Medical now responds to the demands of contemporary treatment concepts with a targeted expansion of its product range – particularly considering immediate loading protocols using the NEVO implants introduced in 2024.

The new sterile abutments with a slim emergence profile offer tangible advantages for everyday clinical use. An additional collar height on the angled variants increases flexibility in complex cases. Clearly legible product labeling on the cone simplifies handling and supports precise workflows. The sterile packaging ensures products are ready for immediate use, saving time and contributing to a smooth workflow.

Modern dentistry demands efficient, safe, and predictable solutions that can flexibly adapt to individual requirements, reduce treatment times, and meet the highest quality standards. Thommen Medical meets these expectations with the new VARIOMulti abutments, which combine clinical relevance with the needs of both – patients and dental practices.
